MOTOR DATA GRAPH - 770-8525F-CC

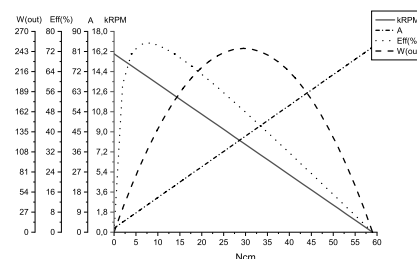

Figure 1 is a line graph showing the dependence of the weight-average molecular weight (M_w) and the polydispersity index (PDI) on the number of cycles (N_c) for the ATRP of MMA. The x-axis represents N_c from 0 to 40. The left y-axis represents M_w (g/mol) from 0.0 to 55.0. The right y-axis represents PDI from 0.0 to 9.0. Four curves are plotted: M_w (solid line), PDI (dashed line), M_w (dotted line), and PDI (dash-dot line). M_w increases linearly with N_c , while PDI increases non-linearly. The M_w (dotted line) and PDI (dash-dot line) curves show a peak around $N_c = 10$ and then decrease.
